Unsigned Parking Areas 63
Official Municipal Parking Lots 79

INTRODUCTION

The annual inventory of carpool parking activity was conducted in November. The inventory surveyed parking areas for the following: signs, facilities, and vehicle counts.

RESULTS

- Total number of official ministry parking lots: 54
- Total number of parking spaces: 3600
- Total number of vehicles parked: 2119
- Average overall occupancy: 59%

In recognition of the growing demand for carpool parking facilities, the Ministry of Transportation opened its first six carpool parking lots in 1979. Since that time, Ontario has continued to steadily expand and improve its network of carpool parking lots; the ministry now operates a total of 54 lots with 3600 spaces.

In the year since the 1990 inventory, the ministry has opened two new carpool parking lots in eastern Ontario and expanded one other, which altogether increased the number of spaces by 4.7%. Two additional lots in central Ontario, which have been at or near capacity for the last several years, are currently being expanded to increase the number of spaces available. Improvements were also made to several other lots.

The number of vehicles using the lots dropped slightly from last year, due in part to the relative stability of fuel prices since the end of the Gulf war. Nine lots were at or near full capacity at the time of the survey.

As part of the inventory, many other sites were checked for carpool parking activity. Eighteen sites with carpool activity are identified in the inventory. A total of 190 vehicles were parked at these sites.

Three carpool lots established by the municipality of Sutton and the County of Victoria were surveyed.

BENEFITS

The 2119 vehicles parked in official ministry parking lots:

- SAVE ENERGY – 6 350 000 L of gasoline annually.

- REDUCE CONGESTION – reduced annual vehicle kilometres travelled by 50 008 000 (during the peak hours).

- IMPROVE SAFETY – around intersections; vehicles are no longer parked along interchange ramps.

These benefits are calculated based on the following assumptions:

- Average distance from lot to work: 47.2 km. Taken from TEMP report SAR-81-02, Carpool Parking in the Toronto Commutershed (based on a 1979 survey).

- Fuel efficiency of vehicles: 12.7 L/100 km based on Statistics Canada 1988 Fuel Consumption Survey.

- 250 working days per year.

These figures represent only the savings generated by daytime users of the parking lots during a normal work week. Further savings are generated by the many week-end and evening users of the lots, who carpool perhaps for shopping or recreational purposes.

The 3600 parking spaces provide a safe, convenient, and highly visible service to the public.
